16. A non-transitory computer readable recording medium embodied with a computer program of machine readable instructions, executable by a computer arranged in a digital receiving apparatus, the computer program comprising:

a measuring step of measuring a physical information of a stream of demodulation signal, the physical information indicating a reception quality;

an information separating step of reproducing a stream of demodulation signal, separating it into stream signals on multiplexed respective channels for output, and determining data compression types of the stream signals, the data compression types indicating data types with and without compression;

a decoding step of decoding said stream signals;

a control step of switching and controlling a stream signal for said decoding step to decode out of the stream signals on said respective channels; and

a storing step of storing matching information for indicating matching relationship between physical information and the data compression types of the stream signals on the respective channels,

wherein in said control step,

the matching relationship between said physical information and the data type of the stream signal on a channel selected out of said channels is determined based on said matching information, and

Art Unit: 2611

the stream signal to be decoded in said decoding step is switched to the stream signal on another channel when it is determined that said physical information and the data compression type of the stream signal on said selected channel do not conform to a predetermined relationship.
